Listing of Claims:

1. (Currently Amended) A mobile communication system wherein a mobile router moving with <u>a plurality of mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the mobile communication system comprising:</u>

means a unit for retaining a flag indicating whether the mobile router is active or not;

means <u>a unit</u> for inquiring about routing address information for the mobile router based on the <u>a</u> value of the retained flag when paging is performed to <u>at least one of</u> the mobile <u>node</u> nodes; and

means <u>a unit</u> for performing paging to the mobile node using the obtained routing address information as a result of the inquiry.

- 2. (Currently Amended) The mobile communication system according to claim 1[[;]], further comprising means <u>a unit</u> for setting the flag to a <u>first</u> value indicating an active state in response to a <u>first</u> signal sent from the mobile node and indicating <u>a</u> start of communication, and setting the flag to a <u>second</u> value indicating a dormant state in response to a <u>second</u> signal sent from the mobile node and indicating <u>an</u> end of communication.
- 3. (Currently Amended) A mobile communication system wherein a mobile router moving with a plurality of mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the mobile communication system comprising:

a routing manager comprising:

a table for storing routing address information for the mobile router; and

means <u>a unit</u> for, when the routing address information for the mobile router in the table is updated, notifying the updated routing address information; and

a location manager comprising:

a table for storing the routing address information notified by the routing manager as location area information for the mobile router; and means a unit for performing paging to at least one of the mobile node nodes using the location area information stored in the table.

4. (Currently Amended) A location manager wherein a mobile router moving with <u>a plurality of mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the location <u>manager manager comprising</u>:</u>

means <u>a unit</u> for retaining a flag indicating whether the mobile router is active or not;

means <u>a unit</u> for inquiring about routing address information for the mobile router based on the <u>a</u> value of the retained flag when paging is performed to <u>at least one of</u> the mobile <u>node</u>; and

means <u>a unit</u> for performing paging to the mobile node using the routing address information obtained as a result of the inquiry.

- 5. (Currently Amended) The location manager according to claim 4[[;]] further comprising means a unit for setting the flag to a first value indicating an active state in response to a first signal sent from the mobile node and indicating a start of communication, and setting the flag to a second value indicating a dormant state in response to a second signal sent from the mobile node and indicating an end of communication.
- 6. (Currently Amended) A location manager wherein a mobile router moving with a plurality of mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the location manager manager comprising:

a table for storing routing address information for the mobile router, which is notified whenever the routing address <u>information</u> is updated, as location area information for the mobile router; and

means <u>a unit</u> for performing paging to <u>at least one of</u> the mobile node <u>nodes</u> using the location area information stored in the table.

7. (Currently Amended) A routing manager used for a mobile communication system wherein a mobile router moving with <u>a plurality of</u> mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the routing manager comprising:

a table for storing routing address information for the mobile router; and means a unit for replying the routing address information stored in the table in response to an inquiry from a location manager about the routing address information for the mobile router.

8. (Currently Amended) A routing manager used for a mobile communication system wherein a mobile router moving with <u>a plurality of</u> mobile nodes performs location update of the mobile nodes on behalf of the mobile nodes[[;]], the routing manager comprising:

a table for storing routing address information for the mobile router; and means a unit for, when the routing address information for the mobile router in the table is updated, notifying the updated routing address information to a location manager.
